TITLE : STICKING METHOD OF SURFACE
LAYER THROUGH ELECTRIC WAVE

ABSTRACT : PURPOSE: To stick a surface layer on the ground strongly, reliably and easily, by a method wherein a sticked layer is made to melt by making heating substance which is made to contain in the sticked layer heat by irradiation of electric wave after overlapping of the ground and a surface layer material through the sticked layer.

CONSTITUTION: A sticked layer 1 is made to weld by making the following heating substance heat by irradiation of electric wave after overlapping of the ground 2 and a surface layer 3 through the sticked layer 1 made of a matter to be obtained by mixing substance (hereinafter referred to as the heating substance) such as ferrite to be heated by irradiation of the electric wave with a thermoplastic material such as asphalt, to begin with. The molten sticked layer 1 is made to stick to the surface layer material 3 and the ground 2 and then the surface layer 3 and the ground 2 are unified by making the sticked layer 1 cool and stiffen.
